Chemical Substance Submission Process

Leveraging technology to support visibility & operational efficiencies

$3+ trilion[1] in revenue is generated by the chemical industry annually. It supplies ingredients to other industries including pharmaceutical, consumer products, paint and coatings and cosmetics, just to name a few.

Recent trends[2] in the chemical industry show promise for growth

- Recovering global economy
- Stronger production output
- Growth in emerging markets
- Increasing M&A activities

Chemical CEOs are focused on areas that impact business growth[3]

64% Agree there are more threats to growth now compared to 3 years ago

66% Believe technological advances are likely to transform the Chemical industry

71% Plan to implement cost-reduction initiatives in the coming year

Current systems don't allow for growth, transparency or efficiency

Chemical companies have invested in ERP, MES & CRM systems, but many have failed to strategically invest in systems to manage the substance submission process. This results in challenges with:

Issue Resolution
Delays in complaint handling & corrective actions can notably impact sales & brand reputation

Compliance
Regulatory managers struggle to manage substance submission requirements for 100+ countries

Visibility
Companies have limited visibility into processes or operations at supplier sites

Silo'd Data
Data is stored on paper or in spreadsheets, and cannot be easily queried or integrated with other systems

Regulated Substance Submission Management Software: Providing visibility, efficiency & cost reductions
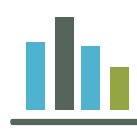

One Central Repository
Control data & process to efficiently manage complex regulatory needs & improve accuracy

Substance Submission Tracking
Increase the speed in which products are taken to market by improved submission management

Reporting & Analytics
Gain visibility into the entire regulatory management to effectively manage the bigger picture

Cloud-based Solution
Support regulatory & operational requirements without the need to manage IT infrastructure
